

This template is designed to help Microsoft suppliers begin structuring AI Impact Assessments under SSPA DPR v12 Section K. It covers the core fields commonly scrutinised during Section K reviews and helps teams structure evidence beyond the form itself. It is intended as a practical starting point. Organisations should verify current requirements against the Microsoft SSPA Program Guide and confirm specific obligations with a qualified SSPA preferred assessor before formal submission.

Built after repeatedly seeing teams struggle with documenting oversight and ownership during AI governance reviews. The form was rarely the problem. Answering for the decisions behind it was.

WHAT THIS TEMPLATE COVERS

The 11 core fields commonly examined in Section K AI Impact Assessments, from system identification and data inputs through to ownership, oversight mechanism, and review cadence.

HOW TO USE IT

Complete one row per AI system in scope for your Microsoft delivery. Adapt field definitions to your environment. Use as a starting point for internal review before formal assessment begins.

WHAT IT IS NOT

Not legal advice, a substitute for qualified assessment, or an official Microsoft document. Does not guarantee compliance. Always verify current requirements with your SSPA preferred assessor.

AI IMPACT ASSESSMENT: COMPLETE ONE ROW PER AI SYSTEM IN SCOPE

AI System Name	Business Purpose	Data Inputs	Outputs and Decisions	Sensitive Use? (Y/N)	Human Oversight Mechanism	Bias and Fairness Considerations	Transparency to Users	Risk Rating (H/M/L)	Accountable Owner	Review Date
NAME	PURPOSE	INPUTS	OUTPUTS	SENSITIVE USE	OVERSIGHT	BIAS	TRANSPARENCY	RATING	OWNER	REVIEW
Name of the AI tool or system	What does it do and why?	What data does it process?	What does it produce or recommend?	Affects hiring, credit, health, biometrics, or monitoring?	How is human review implemented and evidenced?	Has bias been assessed? Which populations are affected?	Are users informed AI is involved?	H = high individual impact, M = moderate, L = minimal	Named individual accountable for this system	Next scheduled review date
NAME	PURPOSE	INPUTS	OUTPUTS	SENSITIVE USE	OVERSIGHT	BIAS	TRANSPARENCY	RATING	OWNER	REVIEW
NAME	PURPOSE	INPUTS	OUTPUTS	SENSITIVE USE	OVERSIGHT	BIAS	TRANSPARENCY	RATING	OWNER	REVIEW
NAME	PURPOSE	INPUTS	OUTPUTS	SENSITIVE USE	OVERSIGHT	BIAS	TRANSPARENCY	RATING	OWNER	REVIEW

PRACTITIONER REVIEW QUESTIONS

? Could this AI system materially influence an individual's opportunities, legal position, or access to services?

? Could misuse or malfunction create downstream harm that the organisation cannot easily detect or reverse?

? Does human oversight exist and can it be demonstrated with evidence, not just described in policy?

? Would an external auditor challenge this assessment as superficial or incomplete?

? Has the system changed materially since the last review? If so, has a new assessment been triggered?

SENSITIVE USE: KEY INDICATORS

! AI used in hiring, candidate screening, or performance evaluation

! AI used in credit scoring, loan decisioning, or financial eligibility

- ! AI used in medical diagnosis, triage, or healthcare recommendations
- ! AI that processes biometric data including facial recognition or voice analysis
- ! AI used to monitor, score, or rank employee behaviour or productivity

Sensitive Use Classification: Based on current SSPA v12 guidance, sensitive-use suppliers may require ISO 42001 certification. Organisations should verify current Microsoft requirements directly with their SSPA preferred assessor, as programme requirements may be updated. **Instructions:** Complete one row per AI system used in connection with Microsoft service delivery. Retain completed assessments as supporting evidence for Section K review. Review each entry annually or when an AI system changes materially in scope, data inputs, or decision outputs.
